

SigmoSS Systems Pvt. Ltd.

Company profile, products and services guide

About the company

SigmoSS Systems Pvt. Ltd. is a technology partner for food and beverage businesses such as restaurants, quick service restaurants (QSR), food-processing units and bakeries. The company helps customers solve problems through technology and experience, delivering quality products developed through intricate process study, robust and assistive implementation, and prompt support.

Mission

To be the best technological partner, using the easiest possible interface and being valuable for each penny to customers. The company calls this its Best / Easy / Economy hypothesis.

Our value

SigmoSS makes a business easy to run by getting fragmented, mundane jobs recorded. This gives owners an aerial view of the business so they can steer it toward desirable results. Its guiding ideas are power to control your business, a 360 degree technological cover for food entrepreneurs, and adding value while increasing profitability.

Achievements

Customers	Installations completed	Years served	Cumulative years of experience

Customers

Customers include Ammi's Biryani, Mango Salsa and Rice Bar.

Agave: the technology framework

Agave is the technology framework from Sigmoss that bridges the gap of information flow to ensure a profitably growing food business, through its various modules. It works through cloud and local integration, giving a direct feed of sales, sales trend, customer satisfaction (C-sat), rush-hour business ease and the live health of a restaurant.

Products

Agave Cloud ERP

Manages the core business processes of a food-processing unit or restaurant with an integrated application for various activities, giving an eagle-eye view of performance and profitability. It enables live monitoring of key strategies implemented to improve and grow the business. It functions on cloud and local integration.

Agave POS

A point-of-sale application that runs on the Windows platform, on a computer, laptop, tablet or mobile phone, for efficient front-end operation of a QSR or table-service restaurant. It streamlines billing and generates reports for analysing sales trends to optimise the menu and sales. It can be integrated with Agave CRM for finer detail.

Agave SCM

Software with a seamless interface to manage multi-outlet restaurants or food units. It manages procurement through centralised purchasing (using organised data to negotiate cost on volumes), manufacturing with pre-defined recipes or standard-to-actual variance, and inventory and logistics with predictive ordering for real-time stock status across multiple locations.

Agave BioSync

Addresses staff attendance, payroll processing and leave management for chain outlets. It lets customers monitor staff attendance and movement, process payroll quickly, and manage employee data including leave and personal records.

Agave CRM

Supports customer retention for food service organisations. Customers are profiled by ordering pattern, preferences and frequency, and customised promotions and offers are used to retain and win back lapsed customers. It captures feedback from happy and unhappy customers on site on a tablet or phone, or after service through missed-call alerts and SMS.

Services

ERP Implementation

360 degree support in implementing ERP. The standard process covers screening, gap analysis, planning, re-engineering, configuration, testing, training and going live. An industry specialist also reviews and ratifies the masters, recipes and mapping, and trains the core team thoroughly on the functionality and process.

Mobile App Development

Customers can bring a painful system or process and SigmoSS compresses it into an app, helping the process flourish in a fast-moving, online, mobile world.

Tailor-Made Technology Solutions

SigmoSS develops and customises technology platforms to resolve nuances in food and beverage, whether people-oriented or process-oriented.

Food Service Consulting

In-house specialists and consultants plan any kind of food service business using years of industry experience, covering design, layout, operations, and human resource recruitment and planning. Also offered as food and bakery consultancy.

Food Menu Development and Engineering

From costing the recipe of each menu item to its composition, mainframe and performance, specialists help build loyalty by reducing menu fatigue while keeping freshness and profitability.

Frequently asked questions

What is Agave?

A technology framework that bridges the gap of information flow to ensure a profitably growing food business, through its various modules.

Why should I use Agave?

Its ease of implementation and the spontaneity it offers in the flow of information through cloud and local integration for sales, sales trend, C-sat and the business health of your food business.

When should I use Agave?

From the first day you start. It is especially useful when you realise you are not in complete control of customer satisfaction, sales and cost, because your business has grown, has spread to multiple locations, you want to start multi-city operations, or your current POS has become redundant.

What do I require to use Agave?

A mindset to use the best available information technology, a Windows system, and a call or mail to SigmoSS. The company takes care of the rest.

How is Agave different from other POS systems?

Agave is built on the latest platform. Its ease of use, together with strong and prompt support, is the clear differentiator.

I am using a POS today. How can I migrate to Agave?

With Sigmoss's data migration technology you can migrate with complete detail from your current POS to Agave or its modules.
